

A large ANA (All Nippon Airways) airplane is parked at an airport gate, connected to a jet bridge. The aircraft is white with blue accents and the ANA logo. Other smaller aircraft and ground service equipment are visible in the background on the tarmac.

OPENTEXT TO SHAREPOINT 365 MIGRATION

INTERNATIONAL AIRPORT ON EAST COAST

OVERVIEW

The client is a major international airport on the East Coast; it utilized OpenText to maintain records, but was being charged approximately \$200,000 per year for OpenText licenses. A large portion of the records stored in OpenText were created during the construction of a rail line extension. The airport is required by the state's records policies to maintain these 4 terabytes of content for 50 years.

APPROACH

Our team of consultants performed an evaluation of the organization's records requirements. An important factor of the analysis was the state's records policies.

SOLUTION

In order to reduce the costs, a decision was made to migrate the content to SharePoint 365. This would reduce the costs from \$200,000/year to roughly \$20,000/year for the first 5 years.

RESULTS

Stellar's advice to migrate the content to SharePoint 365 was able to drastically reduce costs incurred by the client. As the project closeout occurs, this cost would be reduced further.
